

Proposal for a Project in the Field of Stimulants (Psychological)

2 Aug 51  
(95) (average)

Introduction: Same

Project: A Project for the evaluation of the psychological phenomena observed in human beings under stimulation.

Materials: Common stimulants in their pure and available forms- Specific materials to be agreed upon with the contractor.

Phases:

- 1) Effect of stimulation progressively upon
  - a) Coordination
  - b) Dexterity
  - c) Reasoning Power
  - d) Memory
  - e) Inhibition
  - f) Perception
  - g) Initiative
- 2) Determination of the character of hallucinations, if any, which result.  
e.g.- Vision of colors
- 3) Relation of these hallucinations, if possible, to past experience of the subject.
- 4) Determination of the psychological phenomena observable which would be valid warnings of an approaching condition of coma or death.

Variables on humans suggested for Project above:

Rested and fatigued  
Hungry and Fed  
Normal  
Neurotic  
Young and Old  
Moody  
Cheerful  
Smokers and non-smokers. (Chewing tobacco)  
Born Stress Both

(Used the Stimulants as)

Not used as

Good & Shiny (Stimulant) (High Stress)  
Dark Intense (High Stress)
